

# Let's clear the air and preserve your peace and quiet...

*In the future you'll have to listen carefully or you won't hear a Buckeye Wind Project turbine at all.*

*That's because the sound of our turbines from as near as 250 yards is about as loud as the soft hum of a single household refrigerator.*

*Yet every year just one of these turbines generates the equivalent electricity used by 600 refrigerators—and everything else in those homes, too.*

*Energy that doesn't disturb your peace and quiet.  
That's the sound of a smart investment in our future.*

**That's common sense.  
That's EverPower.**
