

Let's clear the air about setbacks...

*On average, our wind turbines sit
More than 2,000 feet from any neighboring house.*

*More than 90% of our turbines are
At least 1,320 feet -- a quarter mile -- from any home.*

*That's well beyond the state's minimum of 914 feet,
Giving the community plenty of room for comfort.*

**Safe setbacks that
More than meet regulations.
That's common sense.
That's EverPower.**
