

# Let's clear the air and talk about the bottom line...

*Wind turbines generate more than safe, clean renewable power. They also generate economic power.*

*Like the economic power to improve our schools, our roads and our police and fire services.*

*The bottom line is that the Buckeye Wind Project will generate as much as \$1.5 million in revenue to local governments and schools every year.*

*Wind power. It's more than clean, safe, renewable energy. It's an economic windfall for this community.*

**That's common sense.  
That's EverPower.**
